

## SYNTHETIC CLEANER

**A generic cleaner and degreaser for industrial applications.**

- Composed of natural and aliphatic hydrocarbons.
- Evaporates very fast.
- Very safe to use.
- Evaporates completely and leaves no residue

### Where to use

A generic cleaner / degreaser for industrial applications. Usable on all sorts of equipment for manual use.

### Packaging

Polycontainer of 10 ltr

### How to use

**SYNTHETIC CLEANER** must be applied undiluted to clean the component or object, if necessary, leave it to work. Loose dirt can be removed with compressed air, brush or cloth, left to dry.

Because of the very rapid evaporation, the cleaned surfaces and components will be suitable for further processing after a short time. The product is very often used as a substitute for harmful chlorinated and fluorinated hydrocarbons because of these properties.

We recommend that you clean a small piece of the object first to test for resistance.

### Properties

Safe to use, contains less than 0.001% aromatics.

**SYNTHETIC CLEANER** is not emulsifying, gives no drainage problems in oil / water separator.

**SYNTHETIC CLEANER** evaporates completely and leaves no residue.

### Safety

The safety information for this product is mentioned in the Safety Data Sheet (MSDS).  
If using cleaning- and/or disinfectant products always use personal protective equipment.

\* Only to be used by professional users.
